

31. Oct. – 2. Nov. 2020 PhD course 3. – 4. Nov. Research forum

Building on community-based perspectives on health research and well-being

The Greenland Center for Health Research at the University of Greenland would like to invite PhD students to apply for attending our PhD course on Indigenous knowledge, ethics and innovative community-based methods in the Arctic. Besides lectures you will be challenged to apply your knowledge on case-examples and your use experiences from your own project. After the PhD course, you are welcome to also attend GCHR's research forum from the 3rd to 4th of November.

UArctic

We anticipated to make lectures available online for PhD students and researchers, who are unable to travel. If sufficient applicants wish to participate online, we will consider organizing online forums for discussions as well.

Health research in Greenland has increasingly moved towards co-creation in research aiming to build on partnerships with communities and to base studies on communities' strengths. The perspectives of communities are crucial for increasing the well-being of the population as well as the individual.

PhD course topics: • How to make your research visible and create sustainable research networks; • Implementation of research results; • Community-based approaches in both quantitative and qualitative research; • Indigenous knowledge and ethics in research in the Arctic; • Sharing circles as a method in qualitative research.
