

UArctic Thematic Network on
Local-scale Planning for Climate Resilience

SPEAKER SERIES

Building resilient places: *the promise and paradox of place-based adaptation*

Sarah Kehler

PhD Candidate,
University of Alberta

Place-based adaptation is often proposed as a pathway to building resilience in the face of climate change - but what exactly is “place,” and why would it matter for resilience?

In this talk Sarah argues that place is a biocultural adaptation that grounds our knowledge and values in unique, spatially-oriented ontologies. Through this lens, Sarah explores what this means for climate adaptation, and those that plan for it.

VIRTUAL TALK
MAY 1, 2026
10-11am (MT)
